

C Major Descending on Strings 2, 3 & 4

Great! Now play the same scale descending, starting with the high-C. Follow it with descending fragments.

TAB 2/4

7 5 6 6 5 5 8 9 3 3 2 1 3 0

LASTLY:

To Finish with we have a 2 note voiced Blues: This also employs the 13 and 13#9 for colour and Maj/min 3rd lick, BUT, this is to be used sparingly as it will muddy and clutter the other instruments otherwise.

Most of the exercises in this book involve quarter notes and eighth notes. The reason for using quarter and eighth notes is that we're not studying rhythm. The way to avoid studying rhythm is to make the duration of all the notes the same. Once you're comfortable with this process, you'll be able to apply it to anything from half notes to sixteenths.

The best way to learn about the available note choices is to isolate each chord in the area of the neck that we're working on. We'll begin the next few exercises by isolating each chord in the first five frets.

Cm7-F7

To help you memorize the shape of each chord in this part of the neck, use one of the patterns given here for your 4-, 5-, or 6-string bass.

Cm7

8 4-string Cm7

9 5-string Cm7

10 6-string Cm7

Once you're able to play up to the tempo of the CD, move on to F7.

By changing strings in this way we can always create smoother ‘voice leading’ between each of the chords in the chord progression. (Voice leading is the technique of arranging chords so that each note moves the smallest possible distance during each chord change). It is also easier to play these chords at speed because our hand is not moving such great distances.

Now let’s look at these common chords played with a 4th string root.

Try playing the same chord sequence just using these chords. This example may be a little more difficult as many people are not as familiar with the note names on the 4th string as they are with the 5th and 6th strings. Take your time and persevere.

Example 2e:

As before, these chords jump up and down the neck a lot, so we can combine them with 5th string chords to make them flow more easily.

Try beginning the chord sequence on a 5th string Gm7b5 and then move to a 4th string C7.

Example 2f:
